Preface to the 4th Edition	xvii
Preface to the 3rd Edition	xxi
Wndsn Quadrant Telemeters	3
Overview	3
What is a Telemeter?	3
Why Low Tech?	4
Applications	5
Historical Background	13
Background	13
1. Kamal	13
2. Nomography	17
3. Slide Rules	19
The Telemeter	25
Introduction	25
Preparation	29
Initial String Setup	29
Positioning the Knots	30

Tools	33
Device Overview: Telemeter	33
Telemeter Sighting	35
Principles	37
The Telemeter Triangle	37
Angular Size	38
Unitlessness	40
Extending the Scales	40
Powers of 10 and Scale Jumps	43
Wndsn String Theory	47
Measurement Accuracy	48
Functions	53
Measuring Distance	53
Determining Object Sizes	57
Measuring Height	57
Measuring in the Dark	61
Thumb as Caliper	62
Small-Angle Calculations	63
Methods	73
Height of Train vs. Length	73
Distance of Cylindrical Objects	74
Measuring the Distance to the Moon	76
Measuring Time Against the Stars	78
The Telemeter as Coordinate Scale	80
Resection	84
Triangulation	85
Trilateration	88
Triangulation	92
Resection Error Margins	93
The Quadrant	99
Introduction	99
What is a Quadrant?	99
What is an Inclinometer?	104

Initial Quadrant Setup	107
Preparing the Plumb Line	107
Tools	109
Device Overview: Quadrant	109
Transversal Scale	113
Quadrant Sighting	115
Sexagesimal System	116
Principles	123
Parallel Translation	123
Projection via Gravity	123
Functions	125
Quadrant and Inclinometer Operation	125
Finding Sine and Cosine	128
Using the Shadow Square	130
Finding Tangent	141
Calculating Slope	144
Methods	151
Measuring the Depth of a Well	151
Measuring from an Elevation	153
Measuring an Elevated Object	155
Mastery of Time and Space	161
Introduction	161
Astronomy	163
Foundations	163
Astronomical Coordinate Systems	165
The Navigational Triangle	173
Converting between Systems	177
The Ecliptic	178
The Declination of the Sun	184

The Horary Quadrant	191
Introduction	191
Tools	193
Device Overview: Quadrant	193
Principles	197
Calculating Time	197
Seasonal (“Unequal”) Hours	199
Equinoctial (“Equal”) Hours	200
Functions	201
Using the Calendar	201
Using the Obliquity Arc	203
Traversing the Quadrant	203
Methods	209
Sun Calculations	209
Measuring Local Latitude	211
Measuring Sun Altitude	213
Calculating Sun Altitude	216
Calculating Sun Declination	221
Solar Time	221
Determining Time	225
Sun Compass	228
Equatorial Sundial	230
Determining Sunlight Hours	236
The Sine Quadrant	243
Introduction	243
Tools	247
Device Overview: Sine Quadrant	247
The Main Scales	248
Principles	253
Cases of Cursor Readings	253

Functions	255
Moving the String	255
Basic Equations	256
Methods	263
Finding Sine and Cosine	263
Great Circle Calculations	264
Determining Sunrise Bearing	268
The Hour Angle	270
Sun Azimuth from Hour Angle	274
Sun Azimuth from Sun Altitude	275
Latitude from Sun Altitude	279
Appendix	283
Metrology	283
Uncertainty	283
Accuracy vs. Precision	284
False Precision	287
Accuracy Determinations	288
Precision of the Quadrant Telemeter	289
Calculating Scale Accuracy	289
Calibration	292
Making Of	295
Toolmaking	295
Engravings	295
Materials	299
Brass Instrument Care	304
Reference	307
Trigonometry	307
Spherical Trigonometry	310
Museum/Archival Description	314
Moon Heuristics	317
High Precision Calculators	319

Useful Tables	323
Multipliers for a Given Angle	323
Radian in Degrees in MIL in MOA	328
Slope in Degrees	330
Slope in Percent	332
Calculations for 24×24 Shadow Square . . .	334
Calculations for 20×20 Shadow Square . . .	336
Sun Declination by Day	337
Length Measurement Conversions	340
Indexed Glossary	343
Symbols	361
Bibliography	363
About Wndsn	371
Contact	372

List of Figures

1	Telemeter in action.	14
2	Telemeter setup.	15
3	Example: Kamal reconstruction.	16
4	Principle of Kamal graduation.	17
5	Example nomogram: Smith chart.	19
6	Slide rule: Pickett N600-ES.	20
7	Slide rule: Faber Castell 62/83N.	21
8	Brass Telemeter.	22
9	Calculating with the nomograph scales.	26
10	Where to knot the string.	29
11	Positioning the knots.	31
12	Device overview: Telemeter.	33
13	Telemeter sighting.	35
14	The Telemeter triangle.	39
15	Using arbitrary units.	41
16	Extending the scales.	42
17	Halving the distance.	43
18	The Chinese Abacus.	45
19	Wndsn string theory.	47
20	Measuring from eye level.	48
21	Bracketing a measurement.	49
22	Operation.	54
23	Simple distance measuring.	55
24	Long distance measurement target.	55
25	Cross-check on Google Maps.	56
26	Known dimension of a structure.	58
27	Measuring a parallel structure.	59

28	Google Maps.	60
29	45°.	61
30	Laser-engraved acrylic.	61
31	Thumb as caliper.	63
32	Using MIL or MOA for small angles. . .	64
33	MKS-formula.	66
34	Measuring the height of a train.	74
35	Distance of cylindrical objects.	75
36	Checking the distance with Google Maps.	76
37	Lunar eclipse on July 27 2018.	77
38	Measuring time against the stars.	78
39	Easting via Telemeter.	82
40	Northing via Telemeter.	83
41	Magnetic compass triangulation.	85
42	Gemma Frisius' triangulation.	87
43	Telemeter trilateration.	88
44	Two position fixes on a circle.	89
45	Trilateration targets.	90
46	Trilateration result.	91
47	Triangulation.	92
48	Resection error margins.	93
49	Telemeter vs. Quadrant scale.	101
50	Universal Horary Quadrant.	102
51	Threading the string through the slot. .	107
52	Device overview: Unequal Hour Quadrant.	109
53	Highlighting the various scales.	111
54	Transversal graduations.	114
55	Quadrant sighting.	115
56	Projection via gravity.	124
57	Quadrant and inclinometer operation. .	126
58	Slope, Quadrant, and inclinometer scales.	127
59	Finding sine.	129
60	Relationships on the Shadow Square. . .	133
61	Sun altitude via LEGO brick.	135
62	Cheops pyramid height.	138
63	How to use the Shadow Square.	139
64	Sighting with the Shadow Square. . . .	140
65	Finding tangent.	142
66	Tangent on the slope scale.	144

67	Elements in slope calculation.	145
68	Slope in degrees.	146
69	Slope in percent.	147
70	Depth of a well via Quadrant.	152
71	Depth of a well via Telemeter.	153
72	Measuring from an elevation.	154
73	Measuring an elevated object.	157
74	The celestial sphere.	164
75	Zenith and azimuth.	168
76	Right ascension.	169
77	The hour angle.	170
78	Navigational triangle.	174
79	Celestial sphere with the nav. triangle. . .	175
80	Navigational triangle with formulas. . .	176
81	The ecliptic.	178
82	Solstices and equinoxes.	181
83	Axial tilt.	183
84	Sun declination by day.	184
85	Device overview: Equal Hour Quadrant. .	193
86	Horary and calendar settings.	202
87	Construction of the obliquity arc.	204
88	Finding local latitude.	212
89	Polaris and Southern Cross.	212
90	Sun altitude via plumb line.	214
91	Sun altitude via gnomon.	215
92	Using the obliquity arc.	218
93	Equation of time.	226
94	Reading the unequal hours.	227
95	Reading the equal hours.	229
96	The Quadrant as a Sun compass.	230
97	AM and PM setup.	232
98	Sundial afternoon setup.	233
99	Using the sundial.	235
100	Gnomon setup.	236
101	Determining sunlight hours.	237
102	Calculating sunlight through the year. .	239
103	Paper Sine Quadrant	243
104	Device overview: Sine Quadrant.	247
105	Unit circle definitions on the Quadrant. .	248

106	Reading degrees from the cursor.	254
107	Basic Sine Quadrant equations 1.	257
108	Basic Sine Quadrant equations 2.	259
109	Finding sine with the Sine Quadrant.	264
110	Great circle calculation.	267
111	Stages of twilight.	269
112	Determine sunrise bearing.	270
113	Hour angle and half-arc of daylight.	274
114	Sun azimuth from Sun altitude.	277
115	North and south from Sun azimuth.	278
116	The Indian Circle.	278
117	Local latitude from Sun altitude.	280
118	Accuracy: trueness and precision.	286
119	Sample measurement uncertainty.	292
120	Calibrating device resolution.	293
121	Wndsn fecit.	296
122	Wndsn single-line fonts.	296
123	Voyager ‘Golden Record’.	297
124	Engraved instructions.	298
125	The “greedy” algorithm.	299
126	Brass patina.	305
127	Unit circle.	309
128	Spherical triangle.	311
129	Moon clock.	318

List of Tables

1	Scale configuration.	35
2	Unitless example.	40
3	Max. angular subtension.	44
4	Sexagesimal fractions.	119
5	Comparison of coordinate systems. . . .	166
6	Sun declination via longitude.	185
7	Sun declination by month.	206
8	Equation of time	226
9	Precision of the scales.	290
10	Sample device uncertainty margins. . . .	290
11	Sample measurement uncertainty.	291
12	Sample device resolution.	294
13	Moon heuristics.	320
14	Multipliers for a given angle.	323
15	Radians in degrees in MIL in MOA. . .	328
16	Slope in percent, degrees, and fractions.	330
17	Slope in degrees and percent.	332
18	Calculations for 24×24 Shadow Square.	334
19	Calculations for 20×20 Shadow Square.	336
20	Sun declination by day (JAN-JUN) . . .	337
21	Sun declination by day (JUL-DEC) . . .	339
22	Length measurement conversions.	341

List of Equations

1	Distance from angular size	37
2	MKS-formula	66
3	Distance from Umbra Recta	132
4	Height from Umbra Versa	132
5	Shadow length from Sun altitude	134
6	Sun altitude from shadow length	134
7	Hour angle via Sun azimuth	177
8	Declination via Sun azimuth	177
9	Sun azimuth via hour angle	177
10	Sun altitude via hour angle	177
11	Obliquity of the ecliptic	184
12	Sun declination via longitude	185
13	Time from Sun altitude	198
14	Sun altitude at noon	216
15	Solar zenith angle	217
16	Sun declination from Sun altitude	221
17	Equation of Time	225
18	Great circle bearing	266
19	Bearing (or amplitude) of rising Sun	268
20	Azimuth of rising Sun	268
21	Hour angle of sunrise from latitude	272
22	Hour angle via Sun altitude	272
23	Hour angle via Sun azimuth	272
24	Sun altitude from hour angle	272
25	Sun azimuth for a given hour	274
26	Sun azimuth from hour angle	275
27	Sun azimuth from altitude	276

28	Latitude from Sun altitude	279
29	Uncertainty	283
30	Device accuracy	288
31	Unit circle definitions	307
32	Trigonometric identities	308
33	Law of sines	309
34	Spherical right-angled triangle identities	312
35	Spherical law of sines	313
36	Spherical cosines law for sides	313
37	Spherical cosines law for angles	313
38	Spherical sine-cosine law	314
39	Slope in degrees	330
40	Slope in percent	332
